No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2,

The invention provides an oral-delivery composition for use in treating hepatitis C virus (HCV) in a HCV-infected patient. The composition comprises ovine interferon-tau (ovIRN-tau), in a dosage effective to stimulate bloodstream levels of 2'', 5'-0ligoadamylate synthetase (OAS). The ovIRN-tau synthesizes OAS which degrades viral mRNA. A method is also provided for monitoring the treatment of HCV by oral administration of ovIRN-tau, by measuring the blood levels of OAS prior to and after such oral administration, and if necessary, adjusting the dose of IRN-tau observed prior to administration. The composition is useful for treating hepatitis caused by HCV and the method is useful for monitoring treatment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a composition for the oral administration of an interferon (IFN) comprising an IFN and a species that stabilises the IFN in an active form by interaction between the IFN and the species. Also described: (1) preparing a protein for oral administration, comprising formulating the protein man active form by binding interaction between the protein and the species, therefore the formulating results in a composition for oral administration; and (2) selecting a dosage form composition for a protein that achieves protein stabilisation for biological activity upon in vivo administration, comprising selecting a protein for formulation, preparing solutions of the selected protein or polypeptide in different buffers at different pH values, and measuring the effect of the buffer on the composition of the protein's terriary structure. The composition and methods are useful for preparing oral dosage forms for administration of

                                                                                                                                                                                                                                                                                                                                            원
                                                                                                                                                                                                                                                                                                                                                                                                                 subject responsive to interferon tau therapy comprises orally administering interferon tau therapy comprises orally administering interferon-tau to the intestinal tract of the subject to produce an intial measurable increase in the subject's blood 2',5'-
oligoademylate synthetaes (OAS) level relative to the blood OAS level in the subject in the absence of interferon-tau administration. The method is useful for treating an autoimmune condition, cancer, or a viral infection. The method is particularly useful for treating multiple sclerosis or hepatitis C infection, diabetes mellitus, systemic lupus erythematosus, amyotrophic lateral sclerosis, Crohn's disease, rheumatoid arthritis, asthma, uveitis, psoriasis, and hypersensitivity disorders. This is the amino acid sequence of recombinant ovine interferon-tau in which the residues at positions 5 and 6 have been altered to Glu and Arg relative to the wild type Arg and Lys.

                                                                                                                                                                                                               The DNA sequence encoding the precursor of ovine trophoblastin was disclosed in PCT WO 89/08706 (see AAR24941). AAR24942-R24945 are isoforms of trophoblastin. They have anti-luteolytic activity and are used to improve survival of transplanted embryos; as a reagent for detecting viability of embryos at an early stage of its development; and to improve the fertility of livestock. (Updated on 25-MAR-2003 to correct PN field.)
New type I interferon variants with added N-terminal di:peptide - include expression cassettes providing high yield in yeast, esp. trophoblast derivs. with e.g. anti-luteolytic activity.

                                                                                                                                                                                                                                  ö
                             The DNA sequence encoding the precursor of ovine trophoblastin was disclosed in PCT WO 89/08706 (see AAR24941). AAR24942-R24945 are isoforms of trophoblastin. They have anti-luteolytic activity and are used to improve aurvival of transplanted embryos, as a reagent for detecting viability of embryos at an early stage of its development; and to improve the fertility of livestock. The protein is useful for inhibitin tumor cell growth, for inhibiting viral replication in cells and enhancing fertility in female mammals. (Updated on 25-MAR-2003 to correct PN field.)

Ovine and human tau interferon may be used in medicaments to treat autoimmune disorders (e.g. multiple sclerosis or rheumatoid archritis), proliferative disorder (e.g. cancer) or a viral disease (e.g. hepatitis B). It can also be used to enhance fertility in female mammals. The medicament is given orally or by injection. Ovine and human tau interferon sequences are given in AAT41504 to AAT41506

This is a mature ovine interferon-tau (OVIFNtau) protein. The ovine and the human interferon-tau (IFN tau) can be used in the treatment of mammalian diseases responsive to IFN tau. The new feature in the creatment is that IFN tau is administered orally. The method is used to treat immune, particularly autoimmune disease, specifically multiple sclerosis (a preferred application, reducing both severity and frequency of relapses), type I diabetes mallitus, lugus erythematosus, amyotrophic lateral sclerosis, Crohn's disease, rheumatoid arthritis, stomatitis, asthma, allergies and psoriasis, particularly in humans or dogs. IFN tau is also useful for treating cancer (e.g. hairy cell leukaemia, Kaposi's sarcoma and multiple myeloma), cell proliferation and viral diseases (hepatitis, human immunodeficiency virus etc., including prevention of maternal transmission). It is also used for increasing fertility in femmed mammals (increasing life time of the corpus lutueum). Oral administration is as effective as injection but is more convenient and generates a lower level of anti-IFN tau antibodies. Use of IFN tau avoids the toxicity associated with use of IFN alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

increase transforms against the present invention describes a novel chimeric nucleic acid which comprises: (i) a 5'-segment encoding the N-terminal amino acid (aa) sequence of an interferon tau (IRNI) polypoptide; and (ii) a 3'-sequence encoding the C-terminal aa sequence of a non-tau type I interferon, with the two segments spliced in a region comprising part of the mature interferon between residues 8 and 37. Hybrid interferon tau type I interferon between residues 8 and 37. Hybrid interferon tau type I interferon between residues 8 and 37. Hybrid interferon to true to the mature interferon between residues 8 and 37. Hybrid interferon to the sensitive tumours) and viral replication (e.g. of thuman interferon to virus, feline leukaemia virus) and to treat autoimmune diseases (e.g. lupus erythematosus, type I diabetes, renumentoid arthritis). Some hybrid interferon fusion polypeptides may block the antiviral/antiproliferative actions of IFNI, so can be used to proke tumnum responses induced by interferon fusion polypeptides can also be used to raise antibodies, used e.g. for analysis of structure/function relationships. The novel chimeric nucleic acid is used to produce recombinant hybrid interferon fusion polypeptides can also be recombinant hybrid interferon fusion polypeptides are less toxic than type I interferons, so can be deministered at higher doses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hybrid nucleic acid encodes fusion of interferon-tau and other interferon - used to inhibit tumour and viral growth, and for treating auto-immune disease, less toxic than native type I interferon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 LQQSFNLFYTEHSSAAWDTTLLEQLCTGLQQQLDHLDTCRGQVMGEEDSELGNMDPIVTV 120

The invention provides an oral-delivery composition for use in treating hepatitis C virus (HCV) in a HCV-infected patient. The composition comprises ovine interferon-tau (ovirN-tau), in a dosage effective to stimulate bloodstream levels of 2', 5'-ollgoadenylate synthetase (OAS). The ovIFN-tau synthesizes OAS which degrades viral mRNA. A method is also provided for monitoring the treatment of HCV by oral administration of ovIFN-tau, by measuring the blood levels of OAS prior to and after such oral administration, and if necessary, adjusting the dose of IFN-tau until a measurable increase in blood OAS level, relative to the level observed prior to administration. The composition is useful for treating hepatitis caused by HCV and the method is useful for monitoring treatment of HCV by oral administration of ovIFN-tau. The present sequence
Hepatitis C virus; HCV infection; ovine; interferon-tau; ovIFN-tau; OAS; 2',5'-oligoadenylate synthetase; virucide; hepatotropic; IFN-tau.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Oral-delivery composition for treating conditions relating to hepatitis caused by hepatitis C virus, comprises ovine interferon-tau which stimulates bloodstream levels of 2',5'-oligoadenylate synthetase.

The composition is administered to a patient in a fasted state to increase the level of 2',5'-oligoademylate synthetase (OAS) in the blood relative to that obtained after administration of interferon-tau to a fed patient. The interferon-tau used in the composition is preferably owine or bovine. The composition is useful in the treatment of autoimmune conditions (e.g., multiple sclerosis, diabetes mellitus, Hashimoto's thyroiditis, rheumatoid arthritis, uveitis, psoriasis, systemic luquus erythematosus, allergies, asthma, eczema, Crohn's disease or ulcerative colitis), viral infections (e.g., HIV infection or hepatitis), disorders associated with callular proliferation (e.g., multiple myeloma, ovarian sequence represents mature ovine interferon-tau.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               An oral dosage form of interferon-tau administered to a subject in a fasted state to achieve an increased level of 2',5'-oligoadenylate synthetase, useful for treating a condition responsive to interferon-tau, e.g. viral infection.

The present invention describes a composition for the oral administration of an interferon (IFN) comprising an IFN and a species that stabilises the IFN in an active form by interaction between the IFN and the species. Also described: (1) preparing a protein for oral administration, comprising formulating the protein for oral administration, comprising formulating the protein with a species that stabilises the protein in an active form by binding interaction between the protein and the species, therefore the formulating results in a composition for oral administration, comprising selecting a dosage form composition for a protein that achieves protein stabilisation for biological activity upon in vivo administration, comprising selecting a protein for formulation, preparing collutions of the selected protein or polypeptide in different buffers at different ph values, and measuring the effect of the buffer on the protein's terriary structure, where the measuring identifies buffers and measuring oral dosage forms for administration of protein's terriary structure. The composition and methods are useful for proparing oral dosage forms for administration of proteins and polypeptides. The present sequence represents the mature of the interferon tau amino acid sequence, which is used in an example
                                                                                    120
                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       composition for oral administration of an interferon (IFN) comprises an NN and a species that stabilizes the IFN in an active form by

```
subject responsive to interferon tau therapy comprises orally administering interferon-tau to the intestinal tract of the subject to produce an initial measurable increase in the subject's blood 2',5'- oligoadenylate syntherase (OAS) level, relative to the blood OAS level in the subject in the absence of interferon-tau administration. The method is useful for treating an autoimmune condition, cancer, or a viral infection. The method is particularly useful for treating multiple sclerosis or hepatitis C infection, diabetes mellitus, systemic lupus arthritis, assubma, uveitis, paorianis, and hypersensitivity disorders. This is the amino acid sequence of ovine interferon-tau.
                                                                                                                           immunosuppressive, cytostatic, virucide, neuroprotective, antidiabetic; muscular, antinflammatory, antirheumatic; antiarthritic, antiasthmatic; dermatological, vaccine; interferon tau; 2',5'-oligoadenylate synthetase; OAS; autoimmune condition; cancer; viral infection; multiple sclerosis; hepatitis C infection; diabetes mellitus; systemic lupus erythematosus; amyotrophic lateral sclerosis; Crohn's disease; rheumatoid arthritis; asthma; uveitis; psoriasis; hypersensitivity disorder; sheep.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treating a condition in a subject, e.g. autoimmune condition, cancer or viral infection, comprises orally administering interferon-tau to the intestinal tract to increase the blood 2'5'-oligoadenylate synthetase level.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a method of treating a condition in a human

The DNA sequence encoding the precursor of ovine trophoblastin was disclosed in PCT WO 89/08706 (see AAR24941). AAR24942-R24945 are isoforms of trophoblastin. They have anti-luteolytic activity and are used to improve survival of transplanted embryos, as a reagent for detecting viability of embryos at an early stage of its development; and to improve the fertility of livestock. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New type I interferon variants with added N-terminal di:peptide - include expression cassettes providing high yield in yeast, esp. trophoblast derivs. with e.g. anti-luteolytic activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrium is receptor of the pulsatile endometrium of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFW-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antitiviral and antiproliferative potency concurrently with particular weak cyclotoxicity, high antiluteolytic activity and immunomodulatory indicatives. In contrast with other IFNS, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. "IFN-tau: a novel subtype I IFN1. Structural characteristics, non-ubiquitous expression, structure-function relationships, a pregnancy hormonal embryonic signal and cross-species therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm. DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy. Polymorrapism: There seems to be three variants of IFN-tau 2: A/PRVZ/P7 (shown here), B/P8V4 and C/P8.

MISCELLANEOUS: IFN-tau genes are intronless. They evolved from IFN-omega in the truninantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=99081096; PubMed=9865498; DOI=10.1016/S0300-9084(99)80029-7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                different biological potency and pattern of expression. SIMILARITY: Belongs to the alpha/beta interferon family. IFNalphaII subfamily.
                                                                                                                                                                                                                                                                                                                                              MEDLINE=96174804; PubMed=8603586; DOI=10.1210/en.137.3.1144; Spencer T.E., Bazer F.W.; Spencer incerferon tau suppresses transcription of the estrogen receptor and oxytocin receptor genes in the ovine endometrium."; Endocrinology 137:1144-1147(1996).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       recognition of pregnancy. Interacts with endometrial interacts probably type I interferon receptors, and blocks estrogen receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxyrocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrial release of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cycloxicity, high antiluteolytic activity and immunomodulatory properties. In contrast with other IFNs, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. "IFN-tau: a novel subtype I IFNI. Structural characteristics, non-ubiquitous expression, structure-function relationships, a pregnancy hormonal embryonic signal and cross-species therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm. DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptua between days 13 and 21 of pregnancy.

MISCELLANEOUS: IFN-tau genes are intronless. They evolved from IFN-omega genes in the runniantia suborder and have continued to duplicate independently in different lineages of the runniantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.

SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphaII subfamily.
                                                                                                                                                                                                                                                                                                                   MEDLINE=99081096; PubMed=9865498; DOI=10.1016/S0300-9084(99)80029-7;

                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                             recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrium is receptor expression of the pulsatile endometrium of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian prostaglandin synthesis, leads in turn to continued ovarian prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyclocoxicity, high antiluteolytic activity and immunomodulatory properties. In contrast with other IFNS, IFN-tau is not virally

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm. Developmenthal STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.

POLYMORPHISM: There seems to be two variants of IFN-tau 3: A/P8V1 (shown here) and B/P8V3.
                                                                                                                                                                                                MEDLINE=99081096; PubMed=9865498; DOI=10.1016/S0300-9084(99)80029-7; Martal J.L., Chene N.M., Huynh L.P., L'Haridon R.M., Reinaud P.B., Guillomot M.W., Charlier M.A., Charpigny S.Y.; "IFN-tau: a novel subtype I IFNI. Structural characteristics, non-ubiquitous expression, structure-function relationships, a pregnancy hormonal embryonic signal and cross-species therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MISCELLANGOUS: IFF, tau genes are intronless. They evolved from IFF, enegage genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression. SIMILARIER: Belongs to the alpha/beta interferon family. IFF alphaII subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PRINTS; PRO0266; INTERFERONAB.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                83
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                 expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the bursh of the pulsatile endometrium. This results in the hormone prostaglandin F2-alpha, hindering the regression of the corpus luttenum (luteolysis) and therefore a return to ovarian prostaglandin synthesis, leads in turn to continued ovarian prospecterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cytotoxicity, high antiluteolytic activity and immunomodulatory properties. In contrast with other IFNs, IFN-tau is not virally
  probably type I interferon receptors, and blocks estrogen receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               84 LQQSFNLFYTEHSSAAWDTTLLDQLCTGLQQQLDHLDTCRDQVMGEKDSELGNMDPIVTV

                                                                                                                                                                                                                                                                                                                          TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm. ByELDOWENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.

MISCELLANEOUS: IFN-teu genes are intronless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.

SIMILARITY: Belongs to the alpha/beta interferon family. IFN-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

RT hormonal embryonic signal and cross-species therapeutic pregnancy potentialities.";

RT hormone prospection by memory interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptor receptor expression, preventing the estrogen-induced interease in oxytocin receptor expression in the endometrial release of the luteolytic suppression of the pulsatile endometrial release of the luteolytic corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IRN-tau on prosetaglandin FZ-alpha, hindering the secretion by the endometrium of the nutrients required for the growth of the endometrium of the nutrients required for the growth of the endometrium of the nutrients required for the growth of the endometrium of the nutrients required for the growth of the antiproliferative potency concurrently with particular weak cyclocity, high antiluteolytic activity and immunomodulatory individual

-!- TISSUE SPECIFICITY: Constitutively and exclusively expressed in the monuculear cells of the extra-embryonic trophectoderm.
-!- DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.
-!- MISCELLANBOUS: IFN-tau genes are intronless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with

1- FUNCTION: Paracrine hormone primarly responsible for maternal recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrium in the suppression of the pulsatile endometrium the receptor expression in the endometrium of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IRN-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the endometrium of the nutrients required for the growth of the antiproliferative potency concurrently with particular weak oytotoxicity, high antiluteolytic activity and immunomodulatory inducible.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. -!-SUBCELLULAR LOCATION: Secreted into the uterine lumen.
-!-TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm.
-!-DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.
-!-MISCELLANEOUS: IFN-tau genes are introlless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.
-!-SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphaII subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=99081096; PubMed=9865498; DOI=10.1016/S0300-9084(99)80029-7; Martal J.L., Chene N.M., Huynh L.P., L'Haridon R.M., Reinaud P.B., Guillomot M.W., Charlier M.A., Charpigny S.Y.; "IFN-tau: a novel subtype I IFN1 Structural characteristics, non-ubiquitous expression, structure-function relationships, a pregnancy hormonal embryonic signal and cross-species therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ProDom; PD000550; Interferon abd; 1.

                                                                                                                                                                  recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrial release of the luteolytic hormone prostaglandin P2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cytotoxicity, high antiluteolytic activity and immunomodulatory properties. In contrast with other IFNs, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LQQSFNLFYTEHSSAAWDTTLLEQLCTGLQQQLDHLDTCRGQVMGEEDSELGNMDPIVTV 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- SUBCELLULAR LOCATION: Secreted into the uterine lumen.
-!- TISSUB SPECIFICITY: Constitutively and exclusively expressed in the monouclear cells of the extra-embryonic trophectoderm.
-!- DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.
-!- MISCELLANBOUS: IFN-tau genes are intronless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia.
They encode for proteins very similar in sequence but with
       a pregnancy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrial release of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity This, and a possible direct effect of IRV-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyclocarcity, high antiluteolytic activity and immunomodulatory properties. In contrast with other IPNs, IFN-tau is not virally inducible.

recognition of pregrancy. Interacts with endomeerial receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrial release of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian prostaglandin synthesis, leads in turn to continued ovarian prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyclocoxicity, high antiluteolytic activity and immunomodulatory inducivities. In contrast with other IFNS, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. MISCELLANEOUS: IFN-tau genes are intronless. They evolved from tirro-meas genes in the runminantia abborder and have continued to duplicate independently in different lineages of the runminantia. They encode for proteins very similar in sequence but with sidifferent biological potency and pattern of expression.

SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphaII subfamily.

recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrium. This results in the hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (lutedi) F2-alpha, hindering the regression of the corpus luteum synthesis, leads in turn to contrinued ovarian prostaglandin synthesis, leads in turn to contrinued ovarian prospaterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cytocoxicity, high antiluteolytic activity and immunomodularcry properties. In contrast with other IFNs, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days is and 21 of pregnancy. POLYMORPHISM: There seems to be four variants of IFN-tau 6: A/F6V3, B/F6V2, C/F6V1 and D/F6/F12 (shown here). MISCELLANEOUS: IFN-tau genes are intronless. They evolved from MISCELLANEOUS: IFN-tau genes are intronless. They continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.
